Adobe Releases Security Patch Updates for March 2019

Dear Constituents,

Adobe on Tuesday released its March Security Update, reporting and fixing only two critical flaws: one in **Photoshop CC** and one in **Adobe Digital Editions**.

Both critical flaws could allow a bad actor to achieve arbitrary code execution in the context of the current user, Adobe said. The company said it is not aware of any exploits in the wild for these security issues.

What to do

Users of the affected Adobe software for Windows and macOS systems are highly recommended to update their software packages to the latest versions as soon as possible.
